Data tables ..... 3

Fieldwork Dates: $17^{\text {th }}-18^{\text {th }}$ May 2012

Data Collection Method: The survey was conducted via online panel. Invitations to complete surveys were sent out to members of the panel. Differential response rates from different demographic groups were taken into account.

Population Sampled: All adults aged 18+ in England, Scotland and Wales.

Sample Size: 500

Data Weighting: Data were weighted to the profile of all adults aged 18+. Data were weighted by gender, age, socio-economic group, region, past vote and likelihood to vote. Targets for the weighted data were derived from the National Readership Survey, a random probability survey comprising 36,000 random face-to-face interviews conducted annually.

Data were analysed and weighted by Danny Kelly and presented by Damian Lyons Lowe and Charlotte Jee of Survation.
