

Where Next For Scotland Poll

21/09/2014

Prepared on behalf of the Mail on Sunday

Methodology

Fieldwork Dates

19th September 2014

Data Collection Method

The survey was conducted via telephone. The telephone poll was a random sample of mobiles and landlines, ordered by key strata to reflect the eligible Scottish population. These strata were, age, sex, local authority, income and employment status.

Population Sampled

All residents aged 16+ in Scotland

Sample Size

871

Data Weighting

Data were weighted to the profile of all adults aged 16+. Data were weighted by age, sex and region. Targets for the weighted data were derived from Office of National Statistics 2011 Census data.

Margin of Error

Because only a sample of the full population was interviewed, all results are subject to margin of error, meaning that not all differences are statistically significant. For example, in a question where 50% (the worst case scenario as far as margin of error is concerned) gave a particular answer, with a sample of 871 it is 95% certain that the 'true' value will fall within the range of 3.3% from the sample result. Subsamples from the cross-breaks will be subject to higher margin of error, conclusions drawn from crossbreaks with very small sub-samples should be treated with caution.

Voting Intention

In order to assess voting intention, we first asked respondents how likely they would be to vote in the next election on a scale of 0-10. This likelihood to vote for was then used to weight voters' responses, such that respondents replying "10" were weighted by a factor of 1.0, whilst those responding "9" were weighted by a factor of 0.9, and so on down to responses of "0" being excluded altogether.

Respondents were then asked who they would be most likely to vote for if that election were tomorrow, with the responses "Labour", "Conservative", "Liberal Democrat" and "SNP" prompted in a randomising order. As an additional weighting step, respondents who replied "undecided" and "refused" were then removed from the sample.

Question presentation

All data tables shown in full below, in order and wording put to respondents, including but not limited to all tables relating to published data and all relevant tables preceding them. Tables for demographic questions might not be included but these should be clear from the cross-breaks on published tables. In all questions where the responses are a list of parties, names or statements, these will typically have been put to respondents in a randomising order. The only questions which would not have had randomising responses would be those in which there was a natural order to maintain – e.g. a scale from “strongly agree” to “strongly disagree”, a list of numbers from 0 to 10 or questions which had factual rather than opinion-related answers such as demographic information. “Other”, “Don't know” and “Refused” responses are not randomised.

Not all questions will have necessarily been asked to all respondents – this is because they may be follow-on questions from previous questions or only appropriate to certain demographic groups. Lower response counts should make clear where this has occurred.

Data were analysed and weighted by Survation and presented by Patrick Bri ne and Damian Lyons Lowe.

Table 7

Q8. Alex Salmond today announced his intention to resign as First Minister and leader of the SNP.

If he is replaced as SNP leader and First Minister by Nicola Sturgeon, would this make you more or less likely to vote SNP in the next Holyrood election, or would it make no difference to your vote?
