## Attitudes to Immigration Poll Current Conservative Voter Tables

## 19/01/2015

Prepared on behalf of Bright Blue

## Methodology

## Fieldwork Dates

$12^{\text {th }}$ September $-30^{\text {th }}$ September 2014

## Data Collection Method

The survey was conducted via online panel. Invitations to complete surveys were sent out to members of the panel. Differential response rates from different demographic groups were taken into account.

## Population Sampled

All residents aged 18+ in Great Britain, who are current Conservative voters.

## Sample Size

1,307

## Data Weighting

Data were weighted to the profile of all adults aged $18+$. Data were weighted by age, sex, and Conservative segment. Targets for the weighted data were derived from "Project Blueprint - Phase 5", September 2014, by Lord Ashcroft.

## Margin of Error

Because only a sample of the full population was interviewed, all results are subject to margin of error, meaning that not all differences are statistically significant. For example, in a question where $50 \%$ (the worst case scenario as far as margin of error is concerned) gave a particular answer, with a sample of 1,307 it is $95 \%$ certain that the 'true' value will fall within the range of $2.7 \%$ from the sample result. Subsamples from the cross-breaks will be subject to higher margin of error, conclusions drawn from crossbreaks with very small sub-samples should be treated with caution.

## Economic / Social Conservatism

Respondents were categorised for the pruposes of cross-breaks by their economic or social conservatism, as measured by their responses to Q22-27. Each response added +1 or -1 to the score of economic / social Conservatism and respondents who scored +2 or more were categorised as Economic/Social Conservatives, those who scored -2 or less as Statists/Liberals.

## Voting Intention

In order to assess voting intention, we first asked respondents how likely they would be to vote in the next election on a scale of $0-10$. This likelihood to vote for was then used to weight voters' responses, such that respondents replying " 10 " were weighted by a factor of 1.0 , whilst those responding " 9 " were weighted by a factor of 0.9 , and so on down to responses of " 0 " being excluded altogether.

Respondents were then asked who they would be most likely to vote for if that election were tomorrow, with the responses "Labour", "Conservative", "Liberal Democrat" and "UKIP" prompted in a randomising order, and other parties displayed if respondents selected "Another Party". For respondents in Scotland and Wales, "SNP" and "Plaid Cymru" respectively were included in the main prompt.

As an additional weighting step, respondents who replied "undecided" and "refused" were then removed from the sample. Undecided responses were then re-inserted into the sample based on a factor of which party they voted for in the 2010 General Election.

## Question presentation

All data tables shown in full below, in order and wording put to respondents, including but not limited to all tables relating to published data and all relevant tables preceding them. Tables for demographic questions might not be included but these should be clear from the cross-breaks on published tables. In all questions where the responses are a list of parties, names or statements, these will typically have been displayed to respondents in a randomising order. The only questions which would not have had randomising responses would be those in which there was a natural order to maintain - e.g. a scale from "strongly agree" to "strongly disagree", a list of numbers from 0 to 10 or questions which had factual rather than opinionrelated answers such as demographic information. "Other", "Don't know" and "Refused" responses are not randomised.

Not all questions will have necessarily been asked to all respondents - this is because they may be follow-on questions from previous questions or only appropriate to certain demographic groups. Lower response counts should make clear where this has occurred.

Data were analysed and weighted by Survation and presented by Patrick Briône and Damian Lyons Lowe.
