

Scottish BME

Poll

19/08/2015

Prepared on behalf of Dr Meer, University of Strathclyde

Methodology

Fieldwork Dates

9th July – 6th August 2015

Data Collection Method

The survey was conducted via telephone. A combination of both landline and mobile data were called.

Population Sampled

All residents aged 18+ in Scotland who identify as Asian or Asian British/Scottish, Black African or Caribbean British/Scottish, Mixed or Multiple Ethnic or belonging to another ethnic group (not including White British/Scottish)

Sample Size

502

Sampling Method

Respondents were sampled based on a modelled probability of residents' ethnicity. This was done using a range of demographic indicators selected by Survation. Respondents were asked which ethnic group they considered themselves to belong to.

Data Weighting

Data were weighted to the profile of all BME adults aged 18+ in Scotland. Data were weighted by age, sex, ethnicity and region. Targets for the weighted data were derived from Office of National Statistics 2011 Census data.

Margin of Error

Because only a sample of the full population was interviewed, all results are subject to margin of error, meaning that not all differences are statistically significant. For example, in a question where 50% (the worst case scenario as far as margin of error is concerned) gave a particular answer, with a sample of 502 it is 95% certain that the 'true' value will fall within the range of 4.4% from the sample result. Subsamples from the cross-breaks will be subject to higher margin of error, conclusions drawn from crossbreaks with very small sub-samples should be treated with caution.

Question presentation

All data tables shown in full below, in order and wording put to respondents, including but not limited to all tables relating to published data and all relevant tables preceding them. Tables for demographic questions might not be included but these should be clear from the cross-breaks on published tables. In all questions where the responses are a list of parties, names or statements, these will typically have been displayed to respondents in a randomising order. The only questions which would not have had randomising responses would be those in which there was a natural order to maintain – e.g. a scale from “strongly agree” to “strongly disagree”, a list of numbers from 0 to 10 or questions which had factual rather than opinion-related answers such as demographic information. “Other”, “Don't know” and “Refused” responses are not randomised.

Not all questions will have necessarily been asked to all respondents – this is because they may be follow-on questions from previous questions or only appropriate to certain demographic groups. Lower response counts should make clear where this has occurred.

Data were analysed and weighted by Survation.
