Poll

13/11/2015

Prepared on behalf of the Mail on Sunday

The  **Mail**

ON SUNDAY

Methodology

Fieldwork Dates

12th – 13th November 2015

Data Collection Method

The survey was conducted via online panel. Invitations to complete surveys were sent out to members of the panel. Differential response rates from different demographic groups were taken into account.

Population Sampled

All residents aged 18+ in England

Sample Size

1,015

Data Weighting

Data were weighted to the profile of all English adults aged 18+. Data were weighted by age, sex, region, household income, education and past vote. Targets for the weighted data were derived from Office for National Statistics 2011 Census data and the results of the 2015 General Election.

Margin of Error

Because only a sample of the full population was interviewed, all results are subject to margin of error, meaning that not all differences are statistically significant. For example, in a question where 50% (the worst case scenario as far as margin of error is concerned) gave a particular answer, with a sample of 1,015 it is 95% certain that the 'true' value will fall within the range of 3.1% from the sample result. Subsamples from the cross-breaks will be subject to higher margin of error, conclusions drawn from crossbreaks with very small sub-samples should be treated with caution.

Voting Intention

In order to assess voting intention, we first asked respondents how likely they would be to vote in the next election on a scale of 0-10. This likelihood to vote for was then used to weight voters' responses, such that respondents replying "10" were weighted by a factor of 1.0, whilst those responding "9" were weighted by a factor of 0.9, and so on down to responses of "0" being excluded altogether.

Respondents were then asked who they would be most likely to vote for if that election were tomorrow, with the responses "Labour", "Conservative", "Liberal Democrat" and "UKIP" prompted in a randomising order, and other parties displayed if respondents selected "Another Party".

As an additional weighting step, respondents who replied "undecided" and "refused" were then removed from the sample. Undecided respondents were then re-inserted into the sample based on a factor of which party they voted for in the 2015 General Election. Final published voting intention can therefore be found in the final table of each question.

Question presentation

All data tables shown in full below, in order and wording put to respondents, including but not limited to all tables relating to published data and all relevant tables preceding them. Tables for demographic questions might not be included but these should be clear from the cross-breaks on published tables. In all questions where the responses are a list of parties, names or statements, these will typically have been displayed to respondents in a randomising order. The only questions which would not have had randomising responses would be those in which there was a natural order to maintain – e.g. a scale from “strongly agree” to “strongly disagree”, a list of numbers from 0 to 10 or questions which had factual rather than opinion-related answers such as demographic information. “Other”, “Don't know” and “Refused” responses are not randomised.

Not all questions will have necessarily been asked to all respondents – this is because they may be follow-on questions from previous questions or only appropriate to certain demographic groups. Lower response counts should make clear where this has occurred.

Data were analysed and weighted by Survation (Director of Research – Patrick Briône).

Health Poll

Prepared on behalf of the Mail on Sunday

Table 8

Q5. Normal weightings

Q5. The state of the NHS's finances have been in the news recently, with most hospitals currently spending considerably more money to care for and treat patients than they have in their budgets. To help, the Government has pledged to raise annual spending on the NHS in England by £8 billion above inflation by 2020, to around £124bn. However, there are fears this will not be enough. To maintain the quality of service the NHS currently provides, which of the following two options would you prefer?

Base: All Respondents

Health Poll

Prepared on behalf of the Mail on Sunday

Table 9

Q6. Normal weightings

Q6. Currently the only major services that the NHS charges users for are prescription and dental bills, with all other services being free at the point of use. Charges in these two areas currently raise about 1% of the NHS budget. Some argue that the NHS should start to charge for other major services in order for the NHS to raise a greater proportion of its own budget. However, others argue that all other services should continue to be free at the point of use so that access to services is available to all no matter how well off people are. To what extent do you agree or disagree with the following statement?

"The NHS charging for services should be widened beyond prescription and dental bills."

Table 30

Q27. Normal weightings

Q27. The Government wants to put in place a new contract for NHS junior doctors, which means all doctors below consultant level. Under the proposed contract junior doctors would see their basic pay rise by 11% on average, but lose the right to extra payments for working weekday evenings and Saturdays. The Government argues the new contract is essential to improve hospital care at weekends. The British Medical Association argues the new contract may result in an overall pay cut for those junior doctors who already work the longest hours, and says it is unsafe because safeguards that penalise hospitals which make doctors work very long hours will be removed. Last week the BMA balloted members, asking them if they are 'prepared to take part in industrial action short of a strike', and were 'prepared to take part in strike action'. It has asked them to vote 'yes' to both questions. To what extent do you agree or disagree with the following statements? - 'Junior doctors are right to take industrial action in the current situation.'

Health Poll

Prepared on behalf of the Mail on Sunday

Table 32

Q29. Normal weightings

Q29. The Government wants to put in place a new contract for NHS junior doctors, which means all doctors below consultant level. Under the proposed contract junior doctors would see their basic pay rise by 11% on average, but lose the right to extra payments for working weekday evenings and Saturdays. The Government argues the new contract is essential to improve hospital care at weekends. The British Medical Association argues the new contract may result in an overall pay cut for those junior doctors who already work the longest hours, and says it is unsafe because safeguards that penalise hospitals which make doctors work very long hours will be removed. Last week the BMA balloted members, asking them if they are 'prepared to take part in industrial action short of a strike', and were 'prepared to take part in strike action'. It has asked them to vote 'yes' to both questions. To what extent do you agree or disagree with the following statements? - 'Doctors should never take industrial action, regardless of the circumstances.'
