Prepared on behalf of the ADDE

ADDE

ALLIANCE FOR DIRECT DEMOCRACY IN EUROPE

Methodology

Fieldwork Dates

30th November – 3rd December 2015

Data Collection Method

The survey was conducted via online panel. Invitations to complete surveys were sent out to members of the panel. Different response rates from different demographic groups were taken into account.

Population Sampled

All residents aged 18+ in the United Kingdom

Sample Size

10,015

Data Weighting

Data were weighted to the profile of all adults aged 18+ in the United Kingdom. Data were weighted by age, sex, UK region, household income, education and past vote. Targets for the weighted data were derived from Office for National Statistics data and the results of the 2015 general election.

Margin of Error

Because only a sample of the full population was interviewed, all results are subject to margin of error, meaning that not all differences are statistically significant. For example, in a question where 50% (the worst case scenario as far as margin of error is concerned) gave a particular answer, with a sample of 10,015 it is 95% certain that the 'true' value will fall within the range of 1.0% from the sample result. Subsamples from the cross-breaks will be subject to higher margin of error, conclusions drawn from crossbreaks with very small sub-samples should be treated with caution.

Voting Intention

In order to assess voting intention, we first asked respondents how likely they would be to vote in the next election on a scale of 0–10. This likelihood to vote was then used to weight voters' responses, such that respondents replying "10" were weighted by a factor of 1.0, whilst those responding "9" were weighted by a factor of 0.9, and so on down to responses of "0" being excluded altogether.

Respondents were then asked how they would be most likely to vote if there was a European Union referendum tomorrow, with the responses prompted in a randomising order. As an additional weighting step, respondents who replied "undecided" and "refused" were then removed from the sample.

Question Presentation

All data tables shown in full below, in order and wording put to respondents, including but not limited to all tables relating to published data. Tables for demographic questions might not be included but these should be clear from the cross-breaks on published tables. Question and response option text from questions relating to non-published tables are listed in the appendix. In all questions where the responses are a list of parties, names or statements, these will typically have been displayed to respondents in a randomising order. The only questions which would not have had randomising responses would be those in which there was a natural order to maintain – e.g. a scale from “strongly agree” to “strongly disagree”, a list of numbers from 0 to 10 or questions which had factual rather than opinion-related answers such as demographic information. “Other”, “Don't know” and “Refused” responses are not prompted.

Not all questions will have necessarily been asked to all respondents – this is because they may be follow-on questions from previous questions or only appropriate to certain demographic groups. Lower response counts should make clear where this has occurred.

Data were analysed and weighted by Survation.
