

# Privatisation

# Poll

17/12/2015

Prepared on behalf of We Own It

# Methodology

## Fieldwork Dates

2<sup>nd</sup> – 8<sup>th</sup> December 2015

## Data Collection Method

The survey was conducted via online panel. Invitations to complete surveys were sent out to members of the panel. Differential response rates from different demographic groups were taken into account.

## Population Sampled

All residents aged 18+ in the United Kingdom.

## Sample Size

1037

## Data Weighting

Data were weighted to the profile of all UK adults aged 18+. Data were weighted by age, sex, region, household income, education and past vote. Targets for the weighted data were derived from Office for National Statistics 2011 Census data and the results of the 2015 General Election.

## Margin of Error

Because only a sample of the full population was interviewed, all results are subject to margin of error, meaning that not all differences are statistically significant. For example, in a question where 50% (the worst case scenario as far as margin of error is concerned) gave a particular answer, with a sample of 1037 it is 95% certain that the 'true' value will fall within the range of 3.1% from the sample result. Subsamples from the cross-breaks will be subject to higher margin of error, conclusions drawn from crossbreaks with very small sub-samples should be treated with caution.

## Question Presentation

All data tables shown in full below, in order and wording put to respondents, including but not limited to all tables relating to published data and all relevant tables preceding them. Tables for demographic questions might not be included but these should be clear from the cross-breaks on published tables. In all questions where the responses are a list of parties, names or statements, these will typically have been displayed to respondents in a randomising order. The only questions which would not have had randomising responses would be those in which there was a natural order to maintain – e.g. a scale from “strongly agree” to “strongly disagree”, a list of numbers from 0 to 10 or questions which had factual rather than opinion-related answers such as demographic information. “Other”, “Don’t know” and “Refused” responses are not randomised.

Not all questions will have necessarily been asked to all respondents – this is because they may be follow-on questions from previous questions or only appropriate to certain demographic groups. Lower response counts should make clear where this has occurred.

Data were analysed and weighted by Survation (Director of Research – Patrick Briône).

**Table 1**

**Q1. Normal weightings**

**Q1. Student loans are currently provided by, and repaid to, the Student Loans Company – a non-profit, government owned company. The government have confirmed plans to sell student loan debt from 1998-2012 to private companies. Consequently this debt would be owned by the private sector and graduates would make repayments to private companies. The government argues that selling off student loans will be beneficial for national debt and that assets are better managed by the private sector. Critics say selling assets won't reduce debt in the long term and will leave graduates vulnerable to unmanageable hikes in interest and repayment rates. Which statement is closest to your view?**

Table 2

Q2. Normal weightings

Q2. The Green Investment Bank is government operated and funds environmental projects, such as renewable energy and offshore wind. The Bank mobilises private sector capital into the green economy to help the UK meet its environmental targets. The government recently confirmed plans to "press ahead with the privatisation of the Green Investment Bank", arguing it will help reduce national debt and bring in more investment. Critics argue that privatising the bank will reduce investor confidence and undermine the bank's purpose and the UK's commitment to a green economy. Which statement is closest to your view?
