

Early Parenthood Survey

29/01/2014

Prepared on behalf of The National Childbirth Trust

Early Parenthood Survey

On behalf of the NCT

29/01/14 - 1,006 respondents

Methodology

Fieldwork Dates

24th - 28th January 2014

Data Collection Method

The survey was conducted via online panel. Invitations to complete surveys were sent out to members of the panel. Differential response rates from different demographic groups were taken into account.

Population Sampled

All parents of children aged three and under, in the United Kingdom.

Sample Size

1,006

Data Weighting

Data were weighted to the profile of all parents of children aged three and under. Data were weighted by age & gender of parent, age of child and region of the UK. Targets for the weighted data were derived from Office of National Statistics data on births and household composition.

Margin of Error

Because only a sample of the full population was interviewed, all results are subject to margin of error, meaning that not all differences are statistically significant. For example, in a question where 50% (the worst case scenario as far as margin of error is concerned) gave a particular answer, with a sample of 1,006 it is 95% certain that the 'true' value will fall within the range of 3.1% from the sample result. Sub-samples from the cross-breaks will be subject to higher margin of error, conclusions drawn from cross-breaks with very small sub-samples should be treated with caution.

Early Parenthood Survey

On behalf of the NCT

29/01/14 - 1,006 respondents

Question presentation

All data tables shown in full below, in order and wording put to respondents, including but not limited to all tables relating to published data and all relevant tables preceding them. Tables for demographic questions might not be included but these should be clear from the cross-breaks on published tables.

In all questions where the responses are a list of parties, names or statements, these will typically have been displayed to respondents in a randomising order. The only questions which would not have had randomising responses would be those in which there was a natural order to maintain – e.g. a scale from “strongly agree” to “strongly disagree”, a list of numbers from 0 to 10 or questions which had factual rather than opinion-related answers such as demographic information. “Other”, “Don’t know” and “Refused” responses are not randomised.

Not all questions will have necessarily been asked to all respondents – this is because they may be follow-on questions from previous questions or only appropriate to certain demographic groups. Lower response counts should make clear where this has occurred.

Data were analysed and weighted by Suration and presented by Patrick Briône and Damian Lyons Lowe.
