

SURVATION
SURVEYING THE NATION

Energy Poll

27/10/2013

Prepared on behalf of The Mail On Sunday

Methodology

Fieldwork Dates

25th October 2013

Data Collection Method

The survey was conducted via online panel. Invitations to complete surveys were sent out to members of the panel. Differential response rates from different demographic groups were taken into account.

Population Sampled

All adults aged 18+ England, Scotland and Wales

Sample Size

1,000

Data Weighting

Data were weighted to the profile of all adults aged 18+. Data were weighted by gender, age, region, household income, education and past vote. Targets for the weighted data were derived from Office of National Statistics 2011 Census data and the results of the 2010 General Election.

Margin of Error

Because only a sample of the full population was interviewed, all results are subject to margin of error, meaning that not all differences are statistically significant. For example, in a question where 50% (the worst case scenario as far as margin of error is concerned) gave a particular answer, with a sample of 1,000 it is 95% certain that the 'true' value will fall within the range of 3.1% from the sample result. Sub-samples from the cross-breaks will be subject to higher margin of error, conclusions drawn from cross-breaks with very small sub-samples should be treated with caution.

Question presentation

All data tables shown in full below, in order and wording put to respondents, including but not limited to all tables relating to published data and all relevant tables preceding them. Tables for demographic questions might not be included but these should be clear from the cross-breaks on published tables.

In all questions where the responses are a list of parties, names or statements, these will typically have been displayed to respondents in a randomising order. The only questions which would not have had randomising responses would be those in which there was a natural order to maintain – e.g. a scale from “strongly agree” to “strongly disagree”, a list of numbers from 0 to 10 or questions which had factual rather than opinion-related answers such as demographic information. “Other”, “Don't know” and “Refused” responses are not randomised.

Not all questions will have necessarily been asked to all respondents – this is because they may be follow-on questions from previous questions or only appropriate to certain demographic groups. Lower response counts should make clear where this has occurred.

Data were analysed and weighted by Suration and presented by Patrick Bri ne and Damian Lyons Lowe.

Energy Poll

Prepared on behalf of the Mail on Sunday

Q11. At the moment the average annual household energy bill includes £128 in "green taxes", used to subsidise items such as wind farms, and other government measures By 2020, this figure will be around £270 Do you support or oppose the existence of these charges?

Energy Poll

Prepared on behalf of the Mail on Sunday

Q19A. There are a number of different “green taxes” and other government energy policies - the costs of which are added to consumer energy bills. Below, in brackets is shown the amount of money each policy adds to the average household’s annual energy bill. For each policy, please state whether you think it should be continued, or should be scrapped.

Renewables Obligation: (+£33 to bill) Requires energy companies to get more of their energy from renewable sources like wind and solar power.

Energy Poll

Prepared on behalf of the Mail on Sunday

Q19D. There are a number of different “green taxes” and other government energy policies - the costs of which are added to consumer energy bills. Below, in brackets is shown the amount of money each policy adds to the average household’s annual energy bill. For each policy, please state whether you think it should be continued, or should be scrapped. Smart Meters and 'Better Billing': (+£4 to bill) These give consumers more information about their own energy consumption and costs.
