

Gender Issues Poll

07/01/2016

Prepared on behalf of the Fawcett Society

Methodology

Fieldwork Dates

30th November – 3rd December 2015

Data Collection Method

The survey was conducted via online panel. Invitations to complete surveys were sent out to members of the panel. Differential response rates from different demographic groups were taken into account.

Population Sampled

All residents aged 18+ in the UK

Sample Size

8,165

Data Weighting

Data were weighted to the profile of all UK adults aged 18+. Data were weighted by age, sex, region, household income, education and past vote. Targets for the weighted data were derived from Office for National Statistics 2011 Census data and the results of the 2015 General Election.

Margin of Error

Because only a sample of the full population was interviewed, all results are subject to margin of error, meaning that not all differences are statistically significant. For example, in a question where 50% (the worst case scenario as far as margin of error is concerned) gave a particular answer, with a sample of 8,165 it is 95% certain that the 'true' value will fall within the range of 1.1% from the sample result. Subsamples from the cross-breaks will be subject to higher margin of error, conclusions drawn from crossbreaks with very small sub-samples should be treated with caution.

Question presentation

All data tables shown in full below, in order and wording put to respondents, including but not limited to all tables relating to published data and all relevant tables preceding them. Tables for demographic questions might not be included but these should be clear from the cross-breaks on published tables. In all questions where the responses are a list of parties, names or statements, these will typically have been displayed to respondents in a randomising order. The only questions which would not have had randomising responses would be those in which there was a natural order to maintain – e.g. a scale from “strongly agree” to “strongly disagree”, a list of numbers from 0 to 10 or questions which had factual rather than opinion-related answers such as demographic information. “Other”, “Don’t know” and “Refused” responses are not randomised.

Not all questions will have necessarily been asked to all respondents – this is because they may be follow-on questions from previous questions or only appropriate to certain demographic groups. Lower response counts should make clear where this has occurred.

Data were analysed and weighted by Survation.

Gender Issues Poll

Prepared on behalf of Fawcett Society

Table 13

Q13. Normal weightings

Q13. Jane has been working at her company for 2 years. She currently earns £30,000 a year, and handles £150,000 worth of business for the company annually. Her line manager has recently expressed praise

for Jane's work, and has given her new responsibilities. Because of this Jane has asked for a pay rise. How much should Jane's annual salary be?

Q14. Normal weightings
Q14. John has been working at his company for 2 years. He currently earns £30,000 a year, and handles £150,000 worth of business for the company annually. His line manager has recently expressed praise for John's work, and has given him new responsibilities. Because of this John has asked for a pay rise. How much should John's annual salary be?
