

Bullying Poll

01/09/2017

Prepared on behalf of LBC and the Diana Award

Methodology

Fieldwork Dates

30th August – 1stst September 2017

Data Collection Method

Respondents were interviewed via an online panel in which their parents were enrolled. Parents were asked to consent to this via an online form.

It was possible for children aged 16 to be enrolled in the panel separately from their parents, and to take the survey without their permission.

Population Sampled

UK Children aged 11-16

Sample Size

1,020

Data Weighting

Data were weighted to the profile of all UK children aged 11-16 in the United Kingdom. Data were weighted by age, sex and region. Targets for weighted data were derived from Office for National Statistics Census data.

Margin of Error

Because only a sample of the full population was interviewed, all results are subject to margin of error, meaning that not all differences are statistically significant. For example, in a question where 50% (the worst case scenario as far as margin of error is concerned) gave a particular answer, with a sample of 1,020 it is 95% certain that the 'true' value will fall within the range of 3.1% from the sample result. Subsamples from the cross-breaks will be subject to higher margin of error, conclusions drawn from crossbreaks with very small sub-samples should be treated with caution.

Question presentation

All data tables shown in full below, in order and wording put to respondents, including but not limited to all tables relating to published data and all relevant tables preceding them. Tables for demographic questions might not be included but these should be clear from the cross-breaks on published tables. In all questions where the responses are a list of parties, names or statements, these will typically have been displayed to respondents in a randomising order. The only questions which would not have had randomising responses would be those in which there was a natural order to maintain – e.g. a scale from “strongly agree” to “strongly disagree”, a list of numbers from 0 to 10 or questions which had factual rather than opinion-related answers such as demographic information. “Other”, “Don't know” and “Refused” responses are not randomised.

Not all questions will have necessarily been asked to all respondents – this is because they may be follow-on questions from previous questions or only appropriate to certain demographic groups. Lower response counts should make clear where this has occurred.

Data were analysed and weighted by Survation.
