

Topical Poll

31/01/2018

Prepared on behalf of the Daily Mirror

Methodology

Fieldwork Dates

26th – 29th January 2018

Data Collection Method

The survey was conducted via online panel. Invitations to complete surveys were sent out to members of the panel. Differential response rates from different demographic groups were taken into account.

Population Sampled

All residents aged 18+ in the United Kingdom

Sample Size

1,059

Data Weighting

Data were weighted to the profile of all UK adults aged 18+. Data were weighted by age, sex, region, household income, education, 2017 General Election vote and 2016 EU Referendum vote. Targets for the weighted data were derived from Office for National Statistics 2011 Census data and the results of the 2017 General Election and 2016 EU Referendum.

Margin of Error

Because only a sample of the full population was interviewed, all results are subject to margin of error, meaning that not all differences are statistically significant. For example, in a question where 50% (the worst case scenario as far as margin of error is concerned) gave a particular answer, with a sample of 1,059 it is 95% certain that the 'true' value will fall within the range of 3.1% from the sample result. Subsamples from the cross-breaks will be subject to higher margin of error, conclusions drawn from crossbreaks with very small sub-samples should be treated with caution.

Question presentation

All data tables shown in full below, in order and wording put to respondents, including but not limited to all tables relating to published data and all relevant tables preceding them. Tables for demographic questions might not be included but these should be clear from the cross-breaks on published tables. In all questions where the responses are a list of parties, names or statements, these will typically have been displayed to respondents in a randomising order. The only questions which would not have had randomising responses would be those in which there was a natural order to maintain – e.g. a scale from “strongly agree” to “strongly disagree”, a list of numbers from 0 to 10 or questions which had factual rather than opinion-related answers such as demographic information. “Other”, “Don't know” and “Refused” responses are not randomised.

Not all questions will have necessarily been asked to all respondents – this is because they may be follow-on questions from previous questions or only appropriate to certain demographic groups. Lower response counts should make clear where this has occurred.

Data were analysed and weighted by Survation.

Table 7
Q7. By Normal Weighting
Q7. According to the Institute of Fiscal Studies, raising all bands of income tax by 1% would raise an extra £5.5bn a year, which could be spent on the NHS. This would mean the average person in the UK, who earns £27,600 p.a., would pay around £3.50 more in tax each week. Which of the following statements is closest to your opinion?

Base: All Respondents

	Page	Table	Title	Base Description	Base
	4	1	Q1. Some people say that there is a "winter crisis" in the NHS and that it is underfunded. With this in mind, which of the following do you think is the best way to fund the NHS?	Base: All Respondents	1059
	5	2	Q2. Which of the following is closest to your opinion?	Base: All Respondents	1059
	6	3	Q3. If everyone paid £1 extra a week to be able to use the NHS, it is estimated that it would raise £2.75bn a year for the NHS. Which of the following statements is closest to your view?	Base: All Respondents	1059
	7	4	Q4. If everyone paid £2 extra a week to be able to use the NHS, it is estimated that it would raise £5.5bn a year for the NHS. Which of the following statements is closest to your view?	Base: All Respondents	1059
	8	5	Q5. If everyone paid £5 extra a week to be able to use the NHS, it is estimated that it would raise £13.75bn a year for the NHS. Which of the following statements is closest to your view?	Base: All Respondents	1059
	9	6	Q6. If everyone paid £10 extra a week to be able to use the NHS, it is estimated that it would raise £27.5bn a year for the NHS. Which of the following statements is closest to your view?	Base: All Respondents	1059
	10	7	Q7. According to the Institute of Fiscal Studies, raising all bands of income tax by 1% would raise an extra £5.5bn a year, which could be spent on the NHS. This would mean the average person in the UK, who earns £27,600 p.a., would pay around £3.50 more in tax each week. Which of the following statements is closest to your opinion?	Base: All Respondents	1059
	11	8	Q8. Below is a list of treatments or procedures which are currently available for free under the NHS. Do you think that these should continue to be available for free, or do you think they should be means-tested, where those earning above a certain amount have to pay a fee to contribute towards the cost of the treatment or procedure? Cosmetic surgery (e.g. breast enhancements / reduction)	Base: All Respondents	1059
	12	9	Q9. Below is a list of treatments or procedures which are currently available for free under the NHS. Do you think that these should continue to be available for free, or do you think they should be means-tested, where those earning above a certain amount have to pay a fee to contribute towards the cost of the treatment or procedure? Obesity surgery	Base: All Respondents	1059
